IBM18CS079

Computer Networks:

Lab 4:

- 4 PC's, 2 switches & 3 routers were used to create a topology.
- The IP addresses were set
- Static IP routing was done to Router 1
- The other 2 routers were set with default ip routing, like `#iproute 0.0.0.0 0.0.0.0 20.0.0.2`
- The default ip routing is the route taken by the packet when no IP route is set.
- A ping was made from PC0 to PC4, to ensure that the network in topology was working. & received the appropriate ping successful message from cmd prompt.
